

A Project/Event Planner (FEATURES.TXT - May 31, 1994)

=====

Requirements: Windows 3.1, mouse or equivalent, 0.5MB of disk.

-----

A Project/Event Planner is a low-end project planning software application that combines ease of use with excellent flexibility. To create a plan, you simply open a planning document and draw the events at the appropriate location and time frame in the document.

You can use it to plan software development projects, construction projects, landscape projects, schedule accounting audits, schedule the writing and production of large documents or books, schedule resources such as conference rooms or vehicles, plan a big party, etc. Look at the sample plans that come with the product and you will quickly get a better idea of how this software can work for you.

Features include:

- o View time scale by hour, day, week, month, and year.
  - o Define up to 200 plans, 200 resources, and 200 calendars in a database. (You can define multiple databases.)
  - o Define up to 500 events per plan.
  - o Assign up to 8 resources per event.
  - o Define up to 8 predecessors per event.
  - o Assign different calendars (of availability) to each resource.
  - o Assign cost/income to resource usage.
  - o Assign cost/income to events.
  - o Calculate total project cost/income.
  - o Shift forward or backward all events in a plan.
  - o Print 15 different reports.
  - o Export data to spreadsheets, databases, or other applications.
  - o View extensive on-line help.
  - o Select different fonts for each plan.
  - o Select colors for each event.
